DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 17, 18 and 20-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Okanoe et al. [JP 62-242320] in view of DE 29 06 94.

Okanoe et al. discloses a circuit board [figures 1-2] comprising :

- a dielectric substrate [2];
- a plurality of electrically conductive pads [6];
- wiring [4, 5, 8] extending between the pads;
- an air-coil [1] without any core bent into a plurality of sequential loops spaced apart

from each other;

- multiple terminals [figures 1-2] of the coil at respective pads; and
- an electrically conductive material connecting between the pads and respective terminals.

Okanoe et al. discloses the instant claimed invention except for an adjusting means.

DE 29 06 94 discloses an air-core coil component [6, figure 2] adapted to be mounted on a printed circuit board comprising a plurality of sequential loops spaced apart and including an adjusting means [4].

Art Unit: 2832

It would have been obvious to one having ordinary skill in the art at the time the invention was made to include an adjusting means in the circuit board arrangement of Okanoe et al., as suggested by DE 29 06 94, for the purpose of providing a surface for the pick-and-place machine and adjusting the air-core coil.

Regarding claim 18, DE 29 06 94 discloses the adjusting means can be removed.

Regarding claims 20-26, the specific material use for the adjusting means and method use to remove the adjusting means would have been an obvious design consideration based on the desire inductance and intended application use.

Regarding claims 27 and 29, the specific spacing dimension, wire dimension, material use for the coil and diameter of the loops would have been an obvious design consideration based on the desire inductance and intended application use.

Allowable Subject Matter

Claim 19 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

Applicant's arguments with respect to claims 17-29 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
